Introduction to CSS 322 – Security and Cryptography

Dr Steve Gordon

ICT, SIIT

Welcome

- To a first course on the theory and technologies that provide secure computers and networks

- A 3rd year course for computer scientists

Who Am I?

- Steve Gordon
  - Assistant Professor in ICT
- Contact details:
  - Email: steve@siit.tu.ac.th
  - Office: 2304-7, Bangkadi (IT&MT Building)
  - Phone: ext 2014, Mobile: 0817227288
  - Consultation: anytime
  - Website: http://ict.siit.tu.ac.th/~steven/

What will you learn in CSS 322?

- The role of security in computers and networks
- Theory and concepts behind secure systems
  - Cryptography
- Details of important and popular algorithms
  - DES, AES, RSA, Digital Signatures, …
- Internet security techniques and attacks
  - Layered security, viruses, spyware, …
- Details of Internet security protocols
  - IPsec, SSL/TLS, PGP, …
- Legal and ethical issues and current trends

Topics

- Introduction to Security
- Classical Encryption Techniques
- Block Ciphers and DES
- Advanced Encryption Standard
- More on Symmetric Ciphers
- Confidentiality using Symmetric Key Encryption
- Introduction to Number Theory
- Public Key Cryptography
- Public Key Management
- Authentication and Hash Functions
- Authentication Applications
- Internet Security
- Firewalls
- Malicious Software
- Web and Other Security Issues

Theory and Concepts

Protocols and Applications

Why is CSS 322 Useful?

- It will help you get a job!
  - Designing and writing secure applications
  - Designing and managing secure systems (networks, computers)

  - Security certifications (e.g. CISSP, GIAC) are much more valuable than networking/computer certifications (e.g. Microsoft, Cisco)

- You will have an understanding of:
  - The concepts behind most of today's security protocols
  - Details of popular Internet security protocols and systems
  - Techniques for attacking and defending networks
  - Legal and ethical issues that arise in computer security

Prerequisites

- There are no formal prerequisites, but I assume you know:
    - Discrete mathematics (logic, prime numbers, …)
    - Basics of data communications (OSI 7-layers)
    - Operating system concepts (processes, RPC, …)
    - Software design principles (divide-and-conquer, functions, …)
    - Programming languages (e.g. C, C++, Java or similar)

Course Structure

- Lectures
  - 3 hours per week

- Self study
  - At least 6 hours per week
  - Browsing lecture notes BEFORE and AFTER class, reading the textbook and other materials, studying for quizzes and exams, preparing assignments, consultations, group discussions, …

- Assessment

Assessment

- Quizzes
  - 10 minute quizzes at the beginning of selected lectures
  - Cover the topics since the last quiz
  - Test your understanding of lectures, reading materials and homework problems
  - Closed book
  - 8 quizzes; 5 best marks will count
  - 20% total (4% each)
- Assignment
  - Set of problems for you to complete over a number of weeks
  - Test your in-depth understanding of concepts and protocols
  - Open book
  - 20%

Assessment

- Mid-term Exam
  - Closed book
  - 30%
- Final Exam
  - Closed book
  - 30%
- For advice:
  - Closed book assessment is not a memory test (e.g. I won't test your ability to remember S-boxes) – it's a test of understanding
 - We will discuss types of questions and topics before exam

Academic Misconduct

- What is it?
  - Plagiarism, cheating, copying, "lending", …
- Examples
  - Copying assignment answers from friend (verbal or written)
  - Giving your assignment (or some answers) to a friend
  - Looking at neighbours answers during quiz/exam
  - Copying sentences/paragraphs/code from textbooks/Internet without acknowledgement
- Results
  - If detected, questions or entire assessment item may get 0 marks
- Discussion with friends is encouraged; telling your friends answers is not!

Learning Materials

- **Lectures**
  - Attend, listen and ask questions!
  - Will include examples and demonstrations
- **Lecture notes**
  - PDF of Powerpoint slides
  - Available on website and from document services
  - Aim to have available 1 day before lecture
  - Make your own notes
- **Recommended Textbook**
  - "Cryptography and Network Security" by Stallings
  - 4th Edition (90% of my content is based on this)
- **Other Useful Textbooks**
  - Earlier editions of Stallings textbook
  - "Network Security" by Kaufman, Perlman, Speciner
  - These other textbooks should only be used as supplementary readings

Learning Materials

- Recommended Readings
  - Almost every lecture corresponds to a chapter in the Stallings textbook; it is recommended you read the chapter before the lecture
  - For selected topics I will list papers/chapters/websites/standards that should be read

- Course Website
  - All materials will be available from the website
  - Announcements, selected solutions will be on the website

- Mailing list (access via course website)
  - You must subscribe (as will be used for announcements)

Course Web Site

- http://ict.siit.tu.ac.th/~steven/css322/
    - Introduction, Topics, Lecture Notes, Assessment Schedule, Textbooks, Web Links, Extra Handouts, Maillist, …

    - When you click on Lecture Notes (and other handouts) to download, you will be prompted for a username and password:
        - Username: stevecourse
        - Password: siitict
